Технические характеристики на СОЛИ, КИСЛОТЫ (лабораторные химикаты) компании **Sigma-Aldrich**

Виды товаров: соли высокой чистоты для инструментального анализа, соли для классического анализа, кислоты высокой чистоты для инструментального анализа, кислоты высокой чистоты для инструментального анализа, объемные растворы для титрования.

Acids

In Life Science, from complex analysis to routine lab work or production, each demand is unique that requires distinct solution and is governed by different regulations. When looking for products, you have to consider the targeted applications and your specific needs.

To simplify your search, our extensive range of acids is offered under three portfolio brands intended for different applications:

- Sigma-Aldrich® materials for lab and production

Each brand is offered in a variety of volumes, packaging materials, and with different documentation packages. Now, explore and discover the wide range of product portfolio that suits your application.

HIGH PURITY ACIDS FOR INSTRUMENTAL ANALYSIS

We offer a comprehensive range of **LiChropur® high purity acids for HPLC and LC-MS analysis** to minimize background noise and signal suppression. These acids are application-tested by our quality control to meet our customers' expectations.

Our range of **Suprapur®** and **Ultrapur®** products are designed to accommodate your need to buy high purity acids for inorganic trace and ultratrace analysis. Whether you need to meet international standards, follow safety regulations, require large or small quantities you are sure to find the ideal solution in this product range. The products and quality control facilities always comply with the same guidelines and regulations as yours, so quality assurance is of prime importance. We offer tailored range of high purity acids to satisfy the demand for sensitive instrumental techniques (ICP-OES, ICP-MS, AAS, etc.).

ACIDS FOR CLASSICAL ANALYSIS

EMSURE® acids for analysis are our premium grade for all regulated and highly demanding lab applications. Most EMSURE® acids for analysis meet or exceed the requirements of ACS, ISO and/or Reag. Ph Eur. They feature the best and most extensive product specifications available worldwide as well as the widest range of pack sizes and packaging options – from 25 mL glass bottles up to 200 L PE barrels.

If you need less performance, but still top-notch quality and reliability, our acids for analysis **EMPARTA®** are for you. They meet the requirements of ACS and are suitable for a multitude of analytical lab applications. Additionally, our **EMPLURA®** grade of acids covers the most important specification parameters and is suitable for preparative lab work, cleaning and production.

For maximum safety in your lab operations, we have developed innovative packaging solutions like our Safebreak bottle, a PE-coated glass bottle, and the SafetyCap for reagents generating excess pressure in the bottle. With our acids for analysis, you benefit from application-oriented quality, more flexibility and safety, and an excellent cost-performance ratio.

BIOPHARMACEUTICAL AND PHARMACEUTICAL FORMULATION AND PRODUCTION PRODUCTS

In pharmaceuticals, the regulatory world is everchanging. Keeping up with the latest requirements, while not losing track of the market itself is definitely not an easy task to fulfill. And as the pressure caused by generics and biosimilars making their way into the market keeps rising, it becomes more and more important to focus on what really matters: Quality and the right partner throughout your product journey.

We support you in every step of development, scale-up, and production with services that range from process optimization to regulatory affairs support. Our SAFC® portfolio of high-quality products for biopharmaceutical and pharmaceutical formulation and production withstands strict quality control procedures and is produced according to applicable cGMP guidelines.

As part of our Emprove® Program, our raw materials also come with extensive documentation facilitating compliance of your pharma and biopharma product, full supply chain transparency and risk mitigation.

VOLUMETRIC SOLUTIONS FOR TITRATION

Our **Titripur® volumetric solutions** and **Titrisol® concentrates** offer a range of acids in different concentrations for quantifying compounds with the titration method. They are produced and analyzed under high quality standards. The Titripur® solutions are analyzed by our ISO/IEC 17025 accredited laboratory. An innovation in this area are our digital products with an RFID tag on the bottles for seamless data transfer.

Salts

Our extensive portfolio of salts is categorized under three portfolio brands dedicated to different applications:

- Sigma-Aldrich® materials for lab and production

Each portfolio brand offers products in a variety of volumes, packaging materials, and with different documentation packages.

HIGH PURITY SALTS FOR INSTRUMENTAL ANALYSIS

We supply a broad range of **LiChropur™ high purity salts for HPLC and LC-MS analysis**, to minimize background noise and signal suppression. These salts are application-tested by our quality control to meet our customers' expectations.

In addition, we provide **Suprapur® high-purity salts** with purities ranging from 99.99% up to 99.9999% for your sensitive analyses. Suprapur® high-purity salts for sample preparation in the instrumental analysis are produced under strict conditions and the use of sophisticated production and crystallization techniques. Our ISO 9001 quality management makes sure that Suprapur® salts show high batch-to-batch consistency. A batch-specific Certificate of Analysis (CoA) with an extensive impurity profile is provided for each product.

SALTS FOR CLASSICAL ANALYSIS

We offer a comprehensive range of salts for classical analysis under two quality grades: **EMSURE®** and **EMPLURA®**. Our salts are manufactured in strictly controlled conditions, mostly at our facilities in Darmstadt, Germany. The outstanding analytical purity of the premium grade **EMSURE® salts**, makes them ideal for both the qualitative and quantitative inorganic analysis. Most of them meet or exceed international standards such as ISO, ACS, and Reag. Ph Eur., besides being accompanied by an extensive Certificate of Analysis and further useful documentation. Thus, quality control laboratories in the all industries benefit from both the international acceptance of these reagents and the security of analytical laboratory auditing. Further, our **EMPLURA®** grade salts are commonly used for preparative lab work and basic applications. The **EMPLURA® grade salts** profit from adequate specifications with the most common parameters and convenient pack sizes.

QUALITY SALTS FOR RESEARCH AND PRODUCTION

Our extensive range of Sigma-Aldrich® salts cover the most common grades within research and production, from reagent grade to our innovative **Redi-Dri® anhydrous salts** to 99.99%+ metals tested high purity salts. They are the high-quality and proven standard for quality buffers, chemical synthesis, separation, purification, extraction, and other research and production methods for everyday applications. Scalable from bench top to bulk production materials, Sigma-Aldrich® provides reliable salts for your everyday needs.

BIOPHARMACEUTICAL AND PHARMACEUTICAL FORMULATION AND PRODUCTION PRODUCTS

With regulatory requirements continuously increasing, it becomes more and more important to focus on what really matters: Quality and the right partner throughout your product journey.

We support you in every step of development, scale-up, and production with services that range from process optimization to regulatory affairs support. Our SAFC® portfolio of high-quality products for biopharmaceutical and pharmaceutical formulation and production withstands strict quality control procedures and is produced according to applicable cGMP guidelines.

As part of our Emprove® program, our raw materials also come with extensive documentation facilitating compliance of your pharma and biopharma product, full supply chain transparency and risk mitigation.
