Whole Genome Amplification

The availability of sufficient quantities of genomic DNA is crucial for numerous analyses used in the study of human and animal disorders. In many cases, the DNA source is limited, or the available DNA is damaged or degraded, preventing the researcher from performing crucial analyses. Our Whole Genome Amplification (WGA) product line provides a robust and accurate method of amplifying nanogram quantities of starting material into microgram yields with minimal allele drop out. We continue to offer our WGA product line to offer you a

range of solutions for whole genome amplification from a variety of starting material, including buccal swabs, fresh tissue samples, frozen tissue samples, blood cards, peripheral blood and formalin-fixed, paraffin-embedded (FFPE) tissues. The WGA technology allows immortalization of a limited sample providing researchers with the capability to perform all desired analyses on one DNA sample.

WHOLE GENOME AMPLIFICATION (WGA) KITS

Genomic testing and characterization have become an important tool for understanding biological systems. Often, such analysis is hampered by the number of samples to be examined and the availability of sufficient quantities of genomic DNA. This is particularly a problem for rare and archived sources of DNA. The GenomePlex® Whole Genome Amplification (WGA) kits have been developed for use as a high-throughput system for the rapid and highly representative, amplification of genomic DNA from trace amounts of starting material.

The GenomePlex® WGA kits utilize a proprietary amplification technology based upon random fragmentation of genomic DNA and conversion of the resulting small fragments to PCR-amplifiable OmniPlex® Library molecules flanked by universal priming sites. The OmniPlex® library is then amplified using universal oligonucleotide primers and a limited number of cycles. The GenomePlex® WGA kits require nanogram quantities of genomic DNA with yields of 5-10 µg following PCR. This system is suitable with a variety of purified DNA samples including whole blood, blood cards, buccal swabs, plant sources, and formalin-fixed, paraffin-embedded tissue samples.

SINGLE CELL WHOLE GENOME AMPLIFICATION STRATEGIES

The GenomePlex® Single Cell Whole Genome Amplification Kit (WGA4) is designed to amplify the genome of a single cell resulting in a million-fold amplification yielding microgram quantities of genomic DNA. Traditional single cell whole genome amplification methods yield insufficient quantities with significant biased representation. However, the GenomePlex® technology provides amplification efficiency with WGA DNA Polymerase. The Single Cell WGA kit includes all the reagents necessary for cell lysis and subsequent whole genome amplification.

The Single Cell WGA kit has been validated with numerous downstream applications and is suitable for amplification from a variety of sources including plant, polycarbonate fixed cells, lymphocytes, renal cancer cells, epithelial cells, leukemia cells, and fibroblast amniotic cells. The amplified genome is compatible with many downstream applications including comparative genomic hybridization (CGH), microsatellite/STR analysis, SNP analysis, QPCR, and other genotyping analysis.

WHOLE TRANSCRIPTOME AMPLIFICATION

Whole transcriptome amplification (WTA) kits have been developed to generate sufficient transcript targets from minute amounts of RNA. Successful WTA requires accurate replication of representative transcripts present in a sample – without dropout or bias of specific mRNAs. Our WTA kits provide an accurate, fast and simple method of amplifying total RNA from a variety of sources including blood, fixed and frozen tissue, cell culture, FACS sorted cells, plants and microorganisms. Additionally, the WTA (**WTA1**, **WTA2**, **SeqR**) kits provide rapid amplification of total RNA in less than 4 hours without

3'-bias. Amplified RNA (cDNA) is suitable for qPCR, micro array analysis, and traditional cloning. For additional information, please visit our **WTA1**, **WTA2**, or **SeqR** product pages.

SEQPLEX-I DNA AND RNA AMPLIFICATION KITS FOR ILLUMINA® NEXT GENERATION SEQUENCING

The SeqPlex-I DNA and RNA Amplification Kits for whole genome amplification (WGA) and whole transcriptome amplification (WTA) are designed to facilitate Illumina® next-generation sequencing (NGS) from extremely small quantities or degraded/highly fragmented DNA and RNA. Both the WGA and WTA kits utilize a proprietary technology based on random priming of genomic DNA or RNA and conversion of the resulting small fragments to PCR amplifiable library molecules flanked by universal priming sites. The SeqPlex-I WGA and WTA kits allow easy amplification of limited starting samples for convenient direct input onto Illumina® NGS flow cells, enabling you to accelerate your next big discovery.

WTA2

Complete Whole Transcriptome Amplification Kit

DNA polymerase included, Complete Kit with optimized enzyme to amplify total RNA in <4 hours, no 3' bias

WGA2

GenomePlex® Complete Whole Genome Amplification (WGA) Kit

PCR Supplies & Equipment

The polymerase chain reaction (PCR) is a powerful core molecular biology technique. It is an efficient and rapid *in vitro* method for enzymatic amplification of specific DNA or RNA sequences from nucleic acids of various sources. A simple PCR reaction consists of a set of synthetic oligonucleotide primers that flank the target DNA sequence, target DNA, a thermostable DNA polymerase and dNTPs. A repetitive series of cycles involving template denaturation, primer annealing, followed by extension of the annealed primers, yields tremendous amounts of DNA. Because the strands synthesized in one cycle serve as a template in the next, a million-fold increase in the DNA amount is achieved in just 20 cycles. From PCR microplates, plate covers, pipette tips, PCR tubes, and thermocyclers, explore our comprehensive offering of PCR consumables and equipment to support every step of your PCR workflow.

PCR THERMOCYCLERS AND MINI CYCLERS FOR DNA AMPLIFICATION

A **thermal cycler** (also known as a PCR machine or thermocycler) is a laboratory instrument that heats and cools samples in repetitive cycles to facilitate DNA or RNA amplification through the polymerase chain reaction. These machines have become commonplace in labs, although the introduction of mini or portable thermal cyclers has made it easier to perform PCR reactions in the field and classroom. Many thermal cyclers are programmable and allow users to save frequently used protocols. PCR typically requires 20 to 35 cycles comprising two to three temperature steps (denaturation, annealing, and extension).

Combining speed, flexibility, and PCR optimization, the Eppendorf® Mastercycler Thermocyclers are suitable for enhanced PCR functions, like the 2D-Gradient and thorough documentation capabilities. Additionally, we also offer Benchmark Scientific TC models of thermocyclers that are designed for lower throughput needs, while maintaining the same functionality and a lower price point compared to larger units.

Additionally, discover a variety of additional PCR plate seals, including eXTReme™ plate seals, ThermalSeal RT™ plate seals, and AlumaSeal® PCR plate seals to accommodate your PCR workflow needs.

PCR PLATES, STRIPS AND FILMS

With **BRAND® PCR products** you can protect your samples from contamination and evaporation. Cleanroom production, high-quality raw materials, and seamless quality controls by accredited laboratories ensure consistently high standards for cleanliness. Sealing films and covers made to fit plates and tubes significantly reduce evaporation loss and allow for reliable analyses, even with small sample volumes. BRAND® PCR consumable materials are always free from DNase, DNA, RNase, and endotoxins. We also offer **Eppendorf® twin-tec PCR plates** that combine the advantages of using both polypropylene and polycarbonate materials while the **Corning® Thermowell PCR 96 well plates** are suitable for the majority of thermocyclers and ideal for high-throughput automation.

PCR PIPETTE TIPS AND FILTER TIPS

Explore a variety of reliable pipet tips, including market-leaders such as **ART® pipet tips** in our product selection table. In addition, BRAND® pipette tips and filter tips are manufactured in a cleanroom under the most modern production conditions and are automatically rack packed and packaged to ensure that the tips are of consistently high quality. **BRAND® pipette tips** and filter tips are manufactured with high-purity polypropylene, free from DiHEMDA, oleamide, DNA (< 40 fg), RNase (< 8.6 fg), endotoxins (< 1 pg) and ATP (< 1 fg). Additionally, we are proud to offer a portfolio of Eppendorf® products such as Eppendorf pipette tips that are used for liquid handling applications. They are useful for speed processing and avoiding cross-contamination. We offer a broad range of **Eppendorf® pipette tips** for niche applications according to the volume capacities, sterile and non-sterile demands as well as racking. Furthermore, Oxygen consumables include not only pipette tips but also a variety of microplate options to match your specific application needs.

PCR Reagents & Kits

PCR stands for Polymerase Chain Reaction and is a mainstay of virtually every molecular biology lab. PCR is an easy and affordable method for amplifying specific fragments of DNA by several orders of magnitude. We have specialized kits for a variety of PCR, qPCR, and RT-PCR applications throughout your PCR workflow. Additionally, explore our comprehensive offering of PCR-related resources, including the **Standard PCR Protocol** and **PCR Master Mix Calculator tool**.

- **Direct PCR**
- **Hot Start PCR**
- **KOD DNA Polymerase and Master Mix**
- **Roche PCR, qPCR, RT-PCR, and RT-qPCR Reagents, Protocols, and Resources**
- **LuminoCt™, KiCqStart®, and JumpStart™ Quantitative PCR (qPCR) Master Mix Reagents**
- **RT-PCR and RT-qPCR: Custom Oligos and Probes, DNase, Kits, Master Mixes, Primers, & More**

DIRECT PCR

Direct PCR is a technique that allows scientists to go directly from plant, tissue, or cell culture samples to PCR without DNA isolation or purification steps. The elimination of these laborious extra steps provides tremendous time and resource savings for improved sustainability.

Our **Extract-N-Amp™ PCR kits** are unique as they deliver a combined extraction and amplification process for plant, tissue, and blood sample assays. By incorporating a “lyse & go” method, Extract-N-Amp™ PCR removes the requirement for columns or long enzymatic sample purification. Our direct PCR kits come with the reagents, enzymes, and proprietary buffers that are required to quickly extract and amplify targets of interest from a variety of plant, blood, and tissue samples.

HOT START PCR

Hot Start PCR is a technique that inhibits Hot Start Taq polymerase activity or the incorporation of modified dNTPs during reaction set up until a heat activation step occurs. **Hot Start PCR** allows for reaction set up at room temperature without non-specific

amplification and primer dimer formation. Discover our wide selection of Hot Start PCR enzymes including KOD, FastStart™, JumpStart™, and KAPA Biosystems reagents. For additional information on Hot Start PCR reagents and product information, please navigate the product selection table to meet your Hot Start PCR needs.

KOD DNA POLYMERASE AND MASTER MIX

KOD DNA Polymerase is an ultra-high-fidelity, thermostable DNA polymerase. Numerous independent studies have also verified the superior high-fidelity of KOD DNA Polymerase compared to other thermophilic polymerases. In addition to a low mutation frequency, the fast extension rate and high processivity of KOD polymerase results in higher yields of full-length product in fewer reaction cycles. Combined, these make KOD DNA polymerases the PCR enzyme of choice when speed and fidelity matter. Explore our new **KOD One™ PCR Master Mix**, a ready-to-use 2x PCR master mix containing a novel, genetically modified KOD DNA polymerase (UKOD), along with a new elongation accelerator, enabling fast PCR with an extension time of 5 sec/kb for template DNA <10kb.

ROCHE PCR, QPCR, RT-PCR, AND RT-QPCR REAGENTS, PROTOCOLS, AND RESOURCES

In order to advance your molecular biology research, it is critical to maximize the efficiency of your workflow in a multitude of areas including, genomics, proteomics, and cellular analyses. As a pioneer in genomics and PCR technology, Roche's complete suite of reagents and kits are optimized to reduce hands-on time at the bench, expedite data acquisition and the creation of key tools to test the most challenging of biological hypotheses. With a mutual drive for product quality and scientific excellence, our partnership allows us to bring Roche products to you, so the answers are there when you need them, wherever your work takes you. Explore all **Roche PCR-related reagents and protocols** on the **Roche Products and Molecular Solutions** resource page.

LUMINOCT™, KICQSTART®, AND JUMPSTART QUANTITATIVE PCR (QPCR) MASTER MIX REAGENTS

Quantitative PCR (qPCR) uses the linearity of DNA amplification to determine absolute or relative amounts of a known sequence in a sample. By using a fluorescent reporter in the reaction, it is possible to measure DNA generation in real time. Based on a highly optimized ReadyMix™ chemistry, LuminoCt™ delivers unsurpassed assay speeds without sacrificing accuracy, precision, or sensitivity. LuminoCt™ works seamlessly with most qPCR instruments, so optimization of reaction conditions is kept to an absolute minimum. Often, users can simply choose their kit, build their assay, and begin. Generating the best possible qPCR data has never been faster or easier.

KiCqStart® ReadyMix™ reagents are ready-to-use, highly sensitive master mixes containing all the basic components for qPCR or RT-qPCR. Simply add your primers, probe and water to complete the assay cocktail. Add the cocktail to tubes or plates and then add your template. The KiCqStart® ReadyMix™ reagents are compatible with conventional or fast PCR mode. For more details, see product usage information at **KiCqStart® Probe qPCR ReadyMix™** or **KiCqStart® One-Step Probe RT-qPCR ReadyMix™** reagents. Additionally, the JumpStart Taq ReadyMixes provide a convenient solution for conventional qPCR experiments. The JumpStart Taq antibody delivers antibody-inactivated hot-start PCR which prevents non-specific product formation. Suitable for SYBR® Green and probe-based

detection methods, the product line features options for optimization and offer compatibility with tube-, plate-, and capillary-based instruments. For additional information, please explore our additional SYBR® Green based qPCR reagents and resources.

RT-PCR AND RT-QPCR: CUSTOM OLIGOS AND PROBES, DNASE, KITS, MASTER MIXES, PRIMERS, & MORE

RT-PCR combines two powerful and versatile techniques, reverse transcription and the polymerase chain reaction to generate and amplify cDNA from total RNA or mRNA transcripts. The method is often used to study gene expression at both the RNA and protein levels. The ideal RT-PCR requires a sensitive reverse transcription and a high-fidelity amplification. The reverse transcriptase should be able to detect very low abundance transcripts and/or transcripts containing difficult secondary structure. Our enhanced Avian (eAMV™) Reverse Transcriptase displays all of these characteristics. It is the ideal RT for detecting low abundance messages that may be missed by other reverse transcriptases and it is the best enzyme we have found for transcribing through difficult secondary structure. It is also more tolerant to elevated temperatures than standard AMV, M-MLV, M-MLV RNase H- or AMV RNase H reduced.

For additional recipe calculators and unit converter tools, please visit our [Calculators and Applications resource hub page](#).

KMM-201NV

KOD One™ PCR Master Mix -BLUE-

Ready-to-use 2X hot-start PCR master mix with a modified KOD DNA polymerase optimized for ultra-fast and convenient high-fidelity PCR

71975-M

KOD Xtreme Hot Start DNA Polymerase

Ultra high fidelity dnapolymerase designed for the most challenging PCR applications including: crude sample PCR, amplification of long strand and highly GC-rich DNA templates.

L6669

LuminoCt® qPCR ReadyMix™

For fast probe-based quantitative PCR

M1302

M-MLV Reverse Transcriptase

Moloney Murine Leukemia Virus enzyme & buffer for cDNA synthesis

M8570

Methylated Control DNA

50 ng/ μ L

M8662

Mineral oil

PCR Reagent

D7442

MTP™ Taq DNA Polymerase

Taq DNA Polymerase, free of DNA contaminants

Rat U87

MIRUP

MystiCq® Universal PCR Primer

N9784

Neutralization Solution for Blood

sufficient for 100 reactions, sufficient for 1000 reactions, for molecular biology

71003-M

Nova Taq DNA Polymerase

Ultrapure recombinant enzyme for dependable PCR amplification

71091

Nova Taq Hot Start DNA Polymerase

Heat-activatable modified form of recombinant Taq DNA polymerase

O4387

Oligo(dT)₂₃, Anchored

70 µM in H₂O

CORET

PCR Core kit with Taq DNA polymerase

PCR components in separate tubes to allow for optimization

QR0200

Quantitative RT-PCR ReadyMix™

One step RT-qPCR for probe-based methods, MMLV & hot-start Taq

P4600

ReadyMix™ Taq PCR Reaction Mix

with MgCl₂

RDRT

ReadyScript® cDNA Synthesis Mix

Complete reagent for first strand cDNA synthesis for RT-qPCR

D4812

REDAccuTaq® LA DNA Polymerase

High fidelity Taq with inert dye, 10X buffer included

XNABS

REDExtract-N-Amp™ Blood PCR Kit

sufficient for 10 extractions, sufficient for 10 amplifications

XNAB

REDExtract-N-Amp™ Blood PCR Kit

sufficient for 100 extractions, sufficient for 100 amplifications

XNABR

REDExtract-N-Amp™ Blood PCR Kit

sufficient for 1000 extractions, sufficient for 1000 amplifications

R4775

REDExtract-N-Amp™ PCR ReadyMix™

Ready-to-use 2X PCR Master Mix with Loading Dye

P8240

REDExtract-N-Amp™ PCR ReadyMix™ for Blood

12 mL sufficient for 1000 amplifications

XNAPE

REDExtract-N-Amp™ Plant PCR Kit

sufficient for 100 extractions, sufficient for 500 amplifications

XNAPR

REDExtract-N-Amp™ Plant PCR Kit

sufficient for 1000 extractions, sufficient for 1000 amplifications

XNAP

REDExtract-N-Amp™ Plant PCR Kit

sufficient for 100 extractions, sufficient for 100 amplifications

XNAPE

REDExtract-N-Amp™ Plant PCR Kit

sufficient for 100 extractions, sufficient for 500 amplifications

XNAS

REDExtract-N-Amp™ Seed PCR Kit

sufficient for 100 extractions, sufficient for 100 amplifications

XNASS

REDExtract-N-Amp™ Seed PCR Kit

sufficient for 10 extractions, sufficient for 10 amplifications

XNAT

REDExtract-N-Amp™ Tissue PCR Kit

sufficient for 10 reactions, sufficient for 100 reactions, sufficient for 1000 reactions, hotstart, dNTPs included

D4309

REDTaq® DNA Polymerase

Taq for routine PCR with inert dye, 10X buffer included

D8312

REDTaq® Genomic DNA Polymerase

with MgCl₂

D2812

REDTaq® Genomic DNA Polymerase

without MgCl₂

R2523

REDTaq® ReadyMix™ PCR Reaction Mix

Complete PCR reagent with standard Taq DNA Polymerase and inert dye

D6063

REDTaq® SuperPak™ DNA Polymerase

Taq for routine PCR with inert dye; with 10X buffer & dNTP mix

R1028

Restorase® DNA Polymerase with 10x Reaction Buffer

Enzyme blend for PCR amplification of damaged DNA

S3917

Single-strand Binding Protein from *Escherichia coli*

>95% (SDS-PAGE), for molecular biology, Single strand binding protein to enhance PCR specificity

S4320

SYBR® Green Extract-N-Amp™ PCR ReadyMix™

Amplifications to support Extract-N-Amp Plant and Extract-N-Amp Tissue

XNAPG

SYBR® Green Extract-N-Amp™ Plant PCR Kit

sufficient for 100 preparations

XNATG

SYBR® Green Extract-N-Amp™ Tissue PCR Kit

sufficient for 100 extractions, sufficient for 100 amplifications

XNATRG

SYBR® Green Extract-N-Amp™ Tissue PCR Kit

sufficient for 1000 extractions, sufficient for 1000 amplifications

S4438

SYBR® Green JumpStart™ Taq ReadyMix™

for quantitative PCR, MgCl₂ in buffer

S5193

SYBR® Green JumpStart™ Taq ReadyMix™

for quantitative PCR, without MgCl₂ in buffer

S9194

SYBR® Green JumpStart™ Taq ReadyMix™ for High Throughput qPCR

SYBR® Green qPCR reagent, passive reference dye included

S1816

SYBR® Green JumpStart™ Taq ReadyMix™ for Quantitative PCR, Capillary Formulation

SYBR® Green qPCR reagent for Roche LightCycler® capillary systems

QR0100

SYBR® Green Quantitative RT-qPCR Kit

One step SYBR® Green RT-qPCR with MMLV & hot-start Taq DNA Polymerase

69348-M

T7 Promoter Primer

D4545

Taq DNA Polymerase from *Thermus aquaticus*

with 10× PCR reaction buffer without MgCl₂

D1806

Taq DNA Polymerase from *Thermus aquaticus*

with 10× PCR reaction buffer containing MgCl₂

T7791

Thymidine 5'-triphosphate sodium salt solution

10 mM (pH 7.0)

T9656

Thymidine 5'-triphosphate sodium salt solution

100 mM in H₂O

WTA1

TransPlex® Whole Transcriptome Amplification Kit

DNA polymerase separate.

T3934

TRI Reagent®

LS, For processing fluid samples such as cell suspensions, CSF, and amniotic fluid.

U1006

Uridine 5'-triphosphate trisodium salt solution

HPLC purified, aqueous solution for RNA polymerase transcription
